NEW QUESTION: 1

- A. Option D
- B. Option C

- C. Option B
 - D. Option A
- Answer: C**

NEW QUESTION: 2

You have just recently set up a web and database tier in a VPC and hosted the application. When testing the app, you are not able to reach the home page for the app. You have verified the security groups. What can help you diagnose the issue. Please select:

- A. Use VPC Flow logs to diagnose the traffic
- B. Use the AWS Trusted Advisor to see what can be done.
- C. Use AWS Guard Duty to analyze the traffic
- D. Use AWS WAF to analyze the traffic

Answer: A

Explanation:

Option A is invalid because this can be used to check for security issues in your account, but not verify as to why you cannot reach the home page for your application Option C is invalid because this used to protect your app against application layer attacks, but not verify as to why you cannot reach the home page for your application Option D is invalid because this used to protect your instance against attacks, but not verify as to why you cannot reach the home page for your application The AWS Documentation mentions the following VPC Flow Logs capture network flow information for a VPC, subnet or network interface and stores it in Amazon CloudWatch Logs. Flow log data can help customers troubleshoot network issues; for example, to diagnose why specific traffic is not reaching an instance, which might be a result of overly restrictive security group rules. Customers can also use flow logs as a security tool to monitor the traffic that reaches their instances, to profile network traffic, and to look for abnormal traffic behaviors.

For more information on AWS Security, please visit the following URL:

<https://aws.amazon.com/answers/networking/vpc-security-capabilities>

The correct answer is: Use VPC Flow logs to diagnose the traffic Submit your Feedback/Queries to our Experts

NEW QUESTION: 3

You are tasked to convert autonomous AP static WEP users to Cisco Unified WLC 802.1X EAP users using their current Microsoft Active Directory accounts using a single WLAN. You need to preserve the wired VLAN that these users were connecting on. Which of the below procedures provides the best solution for this conversion?

- A. Configure the WLAN for Layer 2 security and use the WLC

local RADIUS for authentication.

Configure the WLC local RADIUS server to authenticate each user against the Microsoft Active Directory.

Configure the WLC local RADIUS server to pass down IETF RADIUS attributes 64, 65, and 81 containing the appropriate Layer 2 VLAN to the users.

B. Configure the access point groups feature for two groups and map the WLAN to the correct interfaces for each group.

Set the access points to the correct access point group for where these converted WEP users will be located.

Connecting users will be placed on the correct Layer 2 VLAN.

C. Configure two WLANs, one WEP, and one with EAP, but only broadcast the EAP WLAN so that only one SSID is visible.

Configure each WLAN interface mapping to the correct and corresponding dynamic interface.

Then, use the WLC local RADIUS to authenticate users against the current Microsoft Active Directory.

Configure the WLC connecting trunk port to allow the appropriate user wired Layer 2 VLAN.

Configure the interface group feature to contain all of the dynamic interfaces needed.

Configure the single WLAN to use the interface group and authenticate to an external RADIUS

server configured to check the users against the Microsoft Active Directory.

The authenticated users will be placed on the correct VLANs dynamically.

D. Configure the WLAN for the appropriate Layer 2 security settings and ensure that AAA override is configured.

Configure an external RADIUS server to authenticate each user against the Microsoft Active Directory.

Configure the external RADIUS server to pass down IETF RADIUS attributes 64, 65, and 81

containing the appropriate Layer 2 VLAN to the users.

Answer: D

NEW QUESTION: 4

HOTSPOT

You are a development operations engineer. You are a member of the development team and are working on Project A.

You are in the middle of a Sprint 5.

The developers assign work items that instruct you to make changes to config files for web services. The development team needs to add a new functionality to the web services during the

sprint.

You need to query the work items assigned to you that are related to the new functionality.

Which filters should you configure in order to build a flat list of work items? To answer, configure the appropriate options in the dialog box in the answer area.
