NEW QUESTION: 2

You are developing a mobile instant messaging app for a company.

The mobile app must meet the following requirements:

- * Support offline data sync.
- * Update the latest messages during normal sync cycles.

You need to implement Offline Data Sync.

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A.** Return the updatedAt column from the Mobile Service Backend and implement sorting by using the column.
- B.** Return the updatedAt column from the Mobile Service Backend and implement sorting by the message id.
- C.** Push records to Offline Data Sync using an Incremental Sync.
- D.** Retrieve records from Offline Data Sync using an Incremental Sync.
- E.** Retrieve records from Offline Data Sync on every call to the PullAsync method.

Answer: B,D

Explanation:

Explanation

B: Incremental Sync: the first parameter to the pull operation is a query name that is used only on the client. If you use a non-null query name, the Azure Mobile SDK performs an incremental sync. Each time a pull operation returns a set of results, the latest updatedAt timestamp from that result set is stored in the SDK local system tables. Subsequent pull operations retrieve only records after that timestamp.

E (not D): To use incremental sync, your server must return meaningful updatedAt values and must also support sorting by this field. However, since the SDK adds its own sort on the updatedAt field, you cannot use a pull query that has its own orderBy clause.

NEW QUESTION: 3

- A.** Option E
- B.** Option A
- C.** Option B
- D.** Option D
- E.** Option C
- F.** Option F

Answer: C,D

Explanation:

Explanation

If the switch already has the MAC address in its table for the

destination, it will forward the frame directly to the destination port. If it was not already in its MAC table, then they frame would have been flooded out all ports except for the port that it came from.

NEW QUESTION: 4

View the Exhibit and examine the structure of the ORDERS table. The ORDER_ID column is the PRIMARY KEY in the ORDERS table.

Evaluate the following

CREATE TABLE command:

```
CREATE TABLE new_orders(ord_id, ord_date DEFAULT SYSDATE,  
cus_id)
```

AS

```
SELECT order_id.order_date.customer_id
```

```
FROM orders;
```

Which statement is true regarding the above command?

- A.** The NEW_ORDERS table would not get created because the column names in the CREATE TABLE command and the SELECT clause do not match.
- B.** The NEW_ORDERS table would not get created because the DEFAULT value cannot be specified in the column definition.
- C.** The NEW_ORDERS table would get created and only the NOT NULL constraint defined on the specified columns would be passed to the new table.
- D.** The NEW_ORDERS table would get created and all the constraints defined on the specified columns in the ORDERS table would be passed to the new table.
