NEW QUESTION: 1

Which three statements about SPAN traffic monitoring are true? (Choose three.)

- A.** The destination port acts as a normal switchport.
- B.** Traffic from a non-source VLAN is discarded when it arrives on a source VLAN.
- C.** It supports up to 64 SPAN ports per switch.
- D.** It supports up to 32 SPAN ports per switch.
- E.** Only one session can send traffic to an individual destination port.
- F.** Multiple sessions can send traffic to an individual destination port.

Answer: B,C,E

Explanation:

You can create up to a total of 64 SPAN and ERSPAN sessions to define sources and

destinations on the local device. You can also create a SPAN session to monitor multiple VLAN sources and choose only VLANs of interest to transmit on multiple destination ports. For example, you can configure SPAN on a trunk port and monitor traffic from different VLANs on different destination ports. You can configure a particular destination port in only one SPAN session. Traffic from a non-source VLAN is discarded when it arrives on a source VLAN.
