NEW QUESTION: 1

A customer is deploying Northern Storage Suite (NSS) to handle user quotas. They are already running McAfee anti-virus servers for online protection of the CIFS servers on the Data Movers. In preparing for the deployment, you confirm that NSS is a supported solution for this environment.

What should be recommended to the customer?

- A. NSS must be installed on the deployed anti-virus servers
- B. Purchase the VNX Security and Compliance Suite
- C. Third-party quotas cannot be run if an anti-virus solution is in place
- D. Deploy CEE to facilitate the quota system

Answer: D

Answer: D

NEW QUESTION: 3

A. Use the Assembly Registration tool (regasm.exe) to register the assembly and to copy the assembly to the GAC.

B. Use the Strong Name tool (sn.exe) to copy the assembly into the GAC.

C. Use Windows Installer 2.0 to add the assembly to the GAC.

D. Use the Global Assembly Cache tool (gacutil.exe) to add the assembly to the GAC.

E. Use Microsoft Register Server (regsvr32.exe) to add the assembly to the GAC.

Answer: C, D

Explanation:

Explanation

There are two ways to deploy an assembly into the global assembly cache:

* Use an installer designed to work with the global assembly cache. This is the preferred option for installing assemblies into the global assembly cache.

* Use a developer tool called the Global Assembly Cache tool (Gacutil.exe), provided by the Windows Software Development Kit (SDK).

Note:

In deployment scenarios, use Windows Installer 2.0 to install assemblies into the global assembly cache. Use the Global Assembly Cache tool only in development scenarios, because it does not provide assembly reference counting and other features provided when using the Windows Installer.

NEW QUESTION: 4

Sie haben ein Data Warehouse, das die Daten aller Kunden Ihres Unternehmens enthãlt.

Sie müssen eine Abfrage erstellen, die dynamisch eine SELECT-Anweisung aus einer Tabelle mit dem Namen CUSTOMERS generiert.

Die SELECT-Anweisung muss eine vollständige Liste von Spalten generieren.

Ein Teil des richtigen Transact-SQL wurde im Antwortbereich unten bereitgestellt. Geben Sie den Code in den Antwortbereich ein, der das Problem löst und die angegebenen Ziele oder Anforderungen erfüllt. Sie können Code sowohl innerhalb als auch unterhalb des bereitgestellten Codes hinzufügen.

Verwenden Sie die Schaltfläche Syntax überprüfen, um Ihre Arbeit zu überprüfen. Alle Syntax- oder Rechtschreibfehler werden nach Zeilen- und Zeichenposition gemeldet.

Answer:

Explanation:

XML-PFAD

Erläuterung

Fügen Sie in Zeile 7 XML PATH hinzu, um die folgende Zeile abzurufen:

```
FOR XML PATH ('')), 1, 1, ') +
```

So funktioniert es:

1. Holen Sie sich eine XML-Elementzeichenfolge mit FOR XML

Wenn Sie FOR XML PATH am Ende einer Abfrage hinzufügen,

können Sie die Ergebnisse der Abfrage als XML-Elemente ausgeben, wobei der Elementname im PATH-Argument enthalten ist.

Wenn wir zum Beispiel die folgende Anweisung ausführen würden:

```
SELECT ', ' + name
```

```
FROM temp1
```

```
FOR XML-PFAD ('')
```

Durch die Übergabe einer leeren Zeichenfolge (FOR XML PATH ('')) erhalten wir stattdessen Folgendes:

```
, aaa, bbb, ccc, ddd, eee
```

2. Führendes Komma mit STUFF entfernen

Die Anweisung STUFF "stopft" buchstäblich eine Zeichenfolge in eine andere und ersetzt Zeichen in der ersten Zeichenfolge. Wir verwenden es jedoch nur, um das erste Zeichen der resultierenden Werteliste zu entfernen.

```
SELECT abc = STUFF ((
```

```
SELECT ', ' + NAME
```

```
FROM temp1
```

```
FOR XML-PFAD ('')
```

```
), 1, 1, ')
```

```
FROM temp1
```

Hinweis: Der vollständige Code lautet:

```
SELECT 'SELECT' +
```

```
ZEUG ((
```

```
SELECT ', [' + name + ']'
```

```
VON
```

```
WHERE id = OBJECT_ID ('Kunden') AND
```

```
... benenne &lt;&gt; 'mich'
```

```
FOR XML PATH (''), 1, 1, '') +  
"FROM [Customers]"
```
