**NEW QUESTION: 4**

A laptop is recovered a few days after it was stolen. Which of the following should be verified during incident response activities to determine the possible impact of the incident?

- A. TPM PCR values
- B. Presence of UEFI vulnerabilities
- C. File system integrity
- D. Full disk encryption status

**Answer: D**

Explanation:

If the organization have their laptops fully encrypted (FDE), the only thing to be verified is whether the disk is still encrypted and its integrity is preserved (assuming the key used was not leaked).

This would also guarantee that the OS is preserved, since an attacker could not access OS and tamper it.  
The problem is that the question does not inform if the laptop was fully encrypted or not.
