NEW QUESTION: 1

What are DB2 access plans?

- A.** An access plan is one that specifies an order of operations for accessing data in a SQL query. It lets you view statistics for selected tables, indexes, or columns; properties for operators; global information, such as table space and function statistics; and configuration parameters relevant to optimization.
- B.** An access plan is the result of the planning phase for the installation of the DB2 product. It takes into account who will access the database and which permissions they

will have.

C. An access plan is a plan that is created for each table, describing which users or queries will have access to the data that is contained in that particular table.

D. An access plan is part of the security audit that is performed by the DBA, with assistance from the network administrator, to list who will have access to database from the point of view of the operating system.
