**NEW QUESTION: 2**

Amazon RDS is a managed database service that provides a highly available and scalable database engine. Amazon RDS is a managed database service that provides a highly available and scalable database engine. Amazon RDS is a managed database service that provides a highly available and scalable database engine.

- A. Amazon API Gateway is a managed service that provides a highly available and scalable API endpoint. Amazon ECS is a managed service that provides a highly available and scalable container engine.
- B. Amazon API Gateway is a managed service that provides a highly available and scalable API endpoint. AWS Lambda is a managed service that provides a highly available and scalable serverless compute service.
- C. Amazon API Gateway is a managed service that provides a highly available and scalable API endpoint. Auto Scaling is a managed service that provides a highly available and scalable EC2 instance fleet.
- D. Amazon API Gateway is a managed service that provides a highly available and scalable API endpoint. AWS Elastic Beanstalk is a managed service that provides a highly available and scalable application platform.

**Answer: B**

Explanation:

Explanation

AWS Lambda

With Lambda, you can run code for virtually any type of application or backend service - all with zero administration. Just upload your code and Lambda takes care of everything required to run and scale your code with high availability. You can set up your code to automatically trigger from other AWS services or call it directly from any web or mobile app.

Amazon API Gateway

Amazon API Gateway is a fully managed service that makes it

easy for developers to create, publish, maintain, monitor, and secure APIs at any scale. APIs act as the "front door" for applications to access data, business logic, or functionality from your backend services. Using API Gateway, you can create RESTful APIs and WebSocket APIs that enable real-time two-way communication applications. API Gateway supports containerized and serverless workloads, as well as web applications. API Gateway handles all the tasks involved in accepting and processing up to hundreds of thousands of concurrent API calls, including traffic management, CORS support, authorization and access control, throttling, monitoring, and API version management. API Gateway has no minimum fees or startup costs. You pay for the API calls you receive and the amount of data transferred out and, with the API Gateway tiered pricing model, you can reduce your cost as your API usage scales.
