PL-100 VCE dumps help you save time to clear exam, It is all due to the advantage of our useful PL-100 practice materials, and we have these versions of our PL-100 study materials for our customers to choose according to their different study habits:the PDF, the Software and the APP online.

And the warm feedbacks from our customers all over the world [Valid Exam Okta-Certified-Administrator Practice](#) prove that we are considered the most popular vendor in this career, Everyone must want to pass the exam at once.

PL-100 PDF Developed by IT experts.

NEW QUESTION: 1

Evaluate the following SQL commands:

The command to create a table fails. Identify the two reasons for the SQL statement failure?

- A.** You cannot use the NEXTVAL sequence value as a default value for a column.
- B.** You cannot use ORD_NO and ITEM_NO columns as a composite primary key because ORD_NO is also the foreign key.
- C.** You cannot use the BETWEEN clause in the condition of a check constraint.
- D.** You cannot use SYSDATE in the condition of a check constraint.

Answer: A,D

Explanation:

CHECK Constraint

The CHECK constraint defines a condition that each row must satisfy. The condition can use the same constructs as the query conditions, with the following exceptions:

References to the CURRVAL, NEXTVAL, LEVEL, and ROWNUM pseudocolumns

Calls to SYSDATE, UID, USER, and USERENV functions

Queries that refer to other values in other rows

A single column can have multiple CHECK constraints that refer to the column in its definition.

There is no limit to the number of CHECK constraints that you can define on a column.

CHECK constraints can be defined at the column level or table level.

```
CREATE TABLE employees
```

```
(...
```

```
Salary NUMBER(8, 2) CONSTRAINT emp_salary_min
```

```
CHECK (salary > 0),
```

NEW QUESTION: 2

A. Option D

B. Option A

C. Option B

D. Option C

Answer: D

Explanation:

Explanation

If we use 172.16.20.0 to route to 172.16.150.15, then the packet will route back. To clear this error we have to use #no ip route 172.16.20.0 255.255.255.0 172.16.150.15 command in configuration mode.

NEW QUESTION: 3

Case Study

This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other question on this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next sections of the exam. After you begin a new section, you cannot return to this section.

To start the case study

To display the first question on this case study, click the Next button. Use the buttons in the left pane to explore the

content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. If the case study has an All Information tab, note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the Question button to return to the question.

Overview

Background

Alpine Skihouse designs and manufactures skis and ski accessories. The corporate headquarters for the company is located in London. The company has a design office in Rome and sales offices in Paris, Los Angeles, and Boston. The design team director works in the Rome office.

The company plans to implement Skype for Business Server 2015 to address their unified communications needs. The company currently has traditional PBX implementations in each office location and uses a dial-in conferencing system that is hosted on their internal PBX.

The number of users in each office is shown in the following table:

Remote connectivity to all corporate resources and services is provided by SSL virtual private network (VPN) only. The current VPN solution tunnels all traffic to the office. Internet facing services cannot be reached directly from users' laptops when they are traveling.

Problem statements

During the requirements gathering process for the Skype for Business deployment project, users reported the following issues:

Users based in the United States report that they experience poor audio and video quality when they

conduct meetings with users that are not located in the United States.

Users based in the United States report that they experience poor audio and video quality when they

conduct meetings and calls while they remotely connected to the office.

The design team director would like customers to be greeted in the Italian language when they use dial-

in conferencing to join meetings.

The sales team director organizes daily alignment meetings with local sales teams. He reports that

there are issues with the quality of the audio and video.

Proposed solution

London

The following table shows the proposed London Skype for Business Server 2015 server architecture and IP addresses:

The following table shows the proposed Rome Skype for Business Server 2015 server architecture and IP addresses:

Los Angeles

The following table shows the proposed Los Angeles Skype for Business Server 2015 server architecture and IP address:

Requirements

Business requirements

The company has identified the following business requirements: Users must be able to access all Skype for Business services when they work remotely.

The solution must support meetings with up to 10,000 users.

The solution must be highly available, and must withstand the loss of a single component at any point

in time with as little interruptions of service as possible. The language used by Skype for Business services must be localized wherever possible.

The leadership team in the Americas regions hosts an All Hands meeting for all employees four times

per year. All employees are requested to join this meeting. You must not install any additional servers to support this requirement.

Technical requirements

The company has identified the following technical requirements:

The SQL team has completed an upgrade of the entire SQL Server to the latest version. They require

every SQL Server to use a SQL AlwaysOn Availability Group as the high availability (HA) option.

There is no data center within the Boston site.

You must use the secondary data center in London to minimize the impact to users in the event of a

single-site disaster.

Media traffic must only be encrypted once.

You must use the Skype for Business Management ShellInvoke-CsComputerFailOverandInvoke-

CsComputerFailBackcmdlets to perform maintenance actions during daily operations.

You must implement Domain Name System (DNS) load balancing wherever possible.

You need to recommend a solution to meet the audio quality

requirement for remote workers of the Los Angeles office. Which two actions should you perform? Each correct answer presents part of the solution.

- A. Implement a split-tunnel virtual private network (VPN) setup.
- B. Install an Edge pool in the Los Angeles site.
- C. Upgrade the existing virtual private network (VPN) client.
- D. Configure the virtual private network (VPN) solution to respect Differentiated Services Code Point (DSCP) markings.
- E. Replace the existing virtual private network (VPN) solution with Direct Access.
- F. Enable IPv6 support in the Skype for Business topology.

Answer: A,B

NEW QUESTION: 4

Which PPP authentication method sends authentication information in cleartext?

- A. CHAP
- B. CDPCP
- C. MS CHAP
- D. PAP

Answer: D

Explanation:

Explanation/Reference:

Explanation:

PAP authentication involves a two-way handshake where the username and password are sent across the link in clear text; hence, PAP authentication does not provide any protection against playback and line sniffing.

CHAP authentication, on the other hand, periodically verifies the identity of the remote node using a three-way handshake. After the PPP link is established, the host sends a "challenge" message to the remote node. The remote node responds with a value calculated using a one-way hash function. The host checks the response against its own calculation of the expected hash value. If the values match, the authentication is acknowledged; otherwise, the connection is terminated.
